

## **Follow-up and long-term implications**

- The occurrence of second malignancies, particularly if smoking is continued, is of concern in survivors and smoking cessation counselling is essential.
- Two to three-monthly CT scans are recommended in patients with metastatic disease potentially qualifying for further treatments [V, C].
- Six-monthly CT scans for 2 years with lengthening of intervals thereafter are recommended for patients with non-metastatic disease who have received potentially curative treatment [V, C].
